

Project Proposal

In your one-page proposal you should address the following things.

- Discuss the question you are thinking of asking.
- Discuss the data collection process
 - Did you find them in an online database? (Already have them, include a link)
 - Are you planning on collecting your own data? How will you do that?
 - Are you planning on finding data for your project? Where will you find the data?
- Describe the variables involved.
- Are they quantitative or categorical?
- What are typical values?
- What is the relationship between these variables that you are seeking to explore?
- Why are you interested in studying this?

Should be roughly one page.
